1. This communication is in response to applicants election filed on December 16, 2003.
2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the primary winding with two or more coils; different winding distribution; discrete concentric loops; SQUID sensor; the subject matter of claims 9-10; Hall sensor; and rectangular loops must be shown or the feature(s) canceled from the claim(s).

No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.
4. Claims 1-14,46-48 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to enable

one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. It is unclear and not clearly understood as to: in what respect the two or more coils have different winding distributions; how the relative current directions are being switched; what are the discrete concentric loops; what is meant by the phrase "magnetic field is biased". The function of the device as claimed is not clearly understood.

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-14,46-48 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As to claims 1,2,4,5,46, it is unclear and not clearly understood as to: in what respect the two or more coils have different winding distributions; how the relative current directions are being switched; what are the discrete concentric loops; what is meant by the phrase "magnetic field is biased" (claims 4-5). How additional current carrying segments are added to the primary windings. The function of the device as claimed is not clearly understood.

The claims not specifically addressed share the indefiniteness as they depend from rejected base claims.

6. The reply filed on December 16, 2003 is not fully responsive to the prior Office Action because of the above indicated omission(s) or matter(s). See 37 CFR 1.111. Since the above-mentioned reply appears to be *bona fide*, applicant is given **ONE (1) MONTH or THIRTY (30) DAYS** from the mailing date of this notice, whichever is longer, within which to supply the omission or correction in order to avoid abandonment. EXTENSIONS OF THIS TIME PERIOD MAY BE GRANTED UNDER 37 CFR 1.136(a).
